

STRAWBERRY VARIETY EVALUATION

Robert Boozer, Jim Pitts, and Randy Akridge

Strawberry variety trials were conducted at CREC and Brewton Experiment Field to evaluate several new varieties grown on plastic. Very little has changed over the past 10-15 years. The variety ‘Chandler’ has given ground to ‘Camarosa’ in a number of locations, especially in warmer areas.

The following figures are the relative yields from the Chilton Research and Extension Center (CREC), Clanton, and the Brewton Agricultural Research Unit, Brewton.
